

Phil's Story

Allergies

I wouldn't be without my Wenatex

Allergies are a common problem that can effect children and lead to disturbed sleep, which can effect many areas of their life. A person's sleep environment can be critical in managing allergies.

Challenge:

Dust mites are a common cause of allergies. Our beds are perfect breeding grounds for dust mites, with a humid, moist environment.

Phil's son had long suffered from allergies caused by dust mites. "During his childhood, every single night when going to bed he would sneeze and cough for approximately 45 minutes."

Solution:

The Wenatex Sleep System has been designed to help manage symptoms associated with allergies by eliminating the cause. TENCEL Lyocell fibre and powder, along with the Sanitized hygiene function, provide a hygienic sleep environment that is highly effective against moulds, bacteria and dust mites, and have excellent temperature and moisture management properties.

"As soon as he goes to a friend's home for a sleepover or we go on holidays, he starts sneezing again ... Amazing. He now takes his own pillow everywhere."

"From the absolute first night of him getting into his new Wenatex bed, he stopped the reactions (sneezing etc) overnight!! It was absolutely amazing. We couldn't believe the difference it made."

Benefit:

Phil and his wife came across the Wenatex Sleep System and made the decision to purchase Wenatex mattresses, quilts and pillows for themselves and their three children. The whole family benefited from their new purchase, however, one son, who suffered form allergies, experienced an overnight change in his health.
